

SWITCH ALWAYS ON

**Stay Powered.
Stay Connected.
Run Leaner.**

- Built-in Cellular Connectivity
- Battery Backup Onboard
- No Monthly Contracts Up To 3 Years

Power interruptions, service calls, and network dropouts don't need to be part of your operations. With Switch Always On, you can remotely reboot and recover terminals no matter where they are, no matter what the network is doing.

Without SAO, Uptime is at Risk

- You're dispatching techs just to power-cycle a terminal
- LAN/Cellular drops take down critical ATMs & leave you blind with no access to remote tools
- Scaling support across sites is slow and inconsistent

With SAO, You're in Control

1. Reboot terminals remotely in seconds - no truck roll, no delay
2. Stay connected & alert-ready with cellular & battery backup, even during disruptions
3. Monitor power across locations with one cloud dashboard

Built for

Global Terminal Operators

Whether you manage ATMs, POS devices, or mission-critical EFT infrastructure, Switch Always On gives you full visibility and power control, anywhere in the world.

Designed with

A Purpose

1. Keeps terminals operational 24/7 across regions
2. Maintains service and reboot control without relying on unstable networks
3. Enables remote recovery and infrastructure failover
4. Unifies remote control and support, globally

Proven Results

- 60%+ fewer truck rolls to terminal locations
- Hours shaved off mean-time-to-resolution (MTTR)
- Improved SLA compliance for mission-critical services
- Less stress on internal support teams managing distributed fleets

Built-in

Capabilities

FEATURES	AC MODEL	HYBRID MODEL
